Who are we?

#bizapps

About us

BizApps is a Russian IT company

Dozens of IT-products and solutions based on our own technology

We have won the trust of **Russian and overseas companies:**

Russian IT Company

>100 software engineers

10 years of experience

Our brand's products

AI
ML, IoT

Helpdesk

What is Robotic Process Automation?

About RPA

RPA is an acronym for
**Robotic Process
Automation**

Robotic — any entity which can mimic human actions and do complex tasks is known as **robotic**

Process — any sequence of steps that can lead to a meaningful activity is known as a **process**

Automation means doing a task without human intervention. If an entity performs a task without human intervention, that entity is said to be **automated**

Business value of RPA

- Saves time and effort
- Increases staff efficiency
- Reduces transaction costs
- Operates 24*7*365
- Improves data quality
- Reduces labor costs for routine operations
- Makes implementation of business plans without increasing resources possible
- Accelerates customer service
- Delivers fast solution of short-term business objectives

What tasks can be automated?

Data collecting and processing

Reports preparation

Deadlines and data control

Work with external sources

System integration

Conducting customer operations and providing services

Humans and robots responsibility division

An employee performs tasks that require cognitive abilities

Analyzes data and makes decisions

Improves process quality

Generates ideas

A robot helps to perform routine-based tasks

Carries out small tedious tasks

Provides mistakes-free operations

Able to work 24*7*365

**What is
r.obot?**

About r.bot Platform

r.bot – is a platform that allows users to create and to launch robots.

The solution is presented in 2 versions:

Development environment

- Includes tools for robot design(editor, elements inspector, etc.)
- Allows to design unlimited number of robots
- Supports orchestration

Runtime environment

- Allows to launch ready to use robots at different users computers

Visual
Constructor

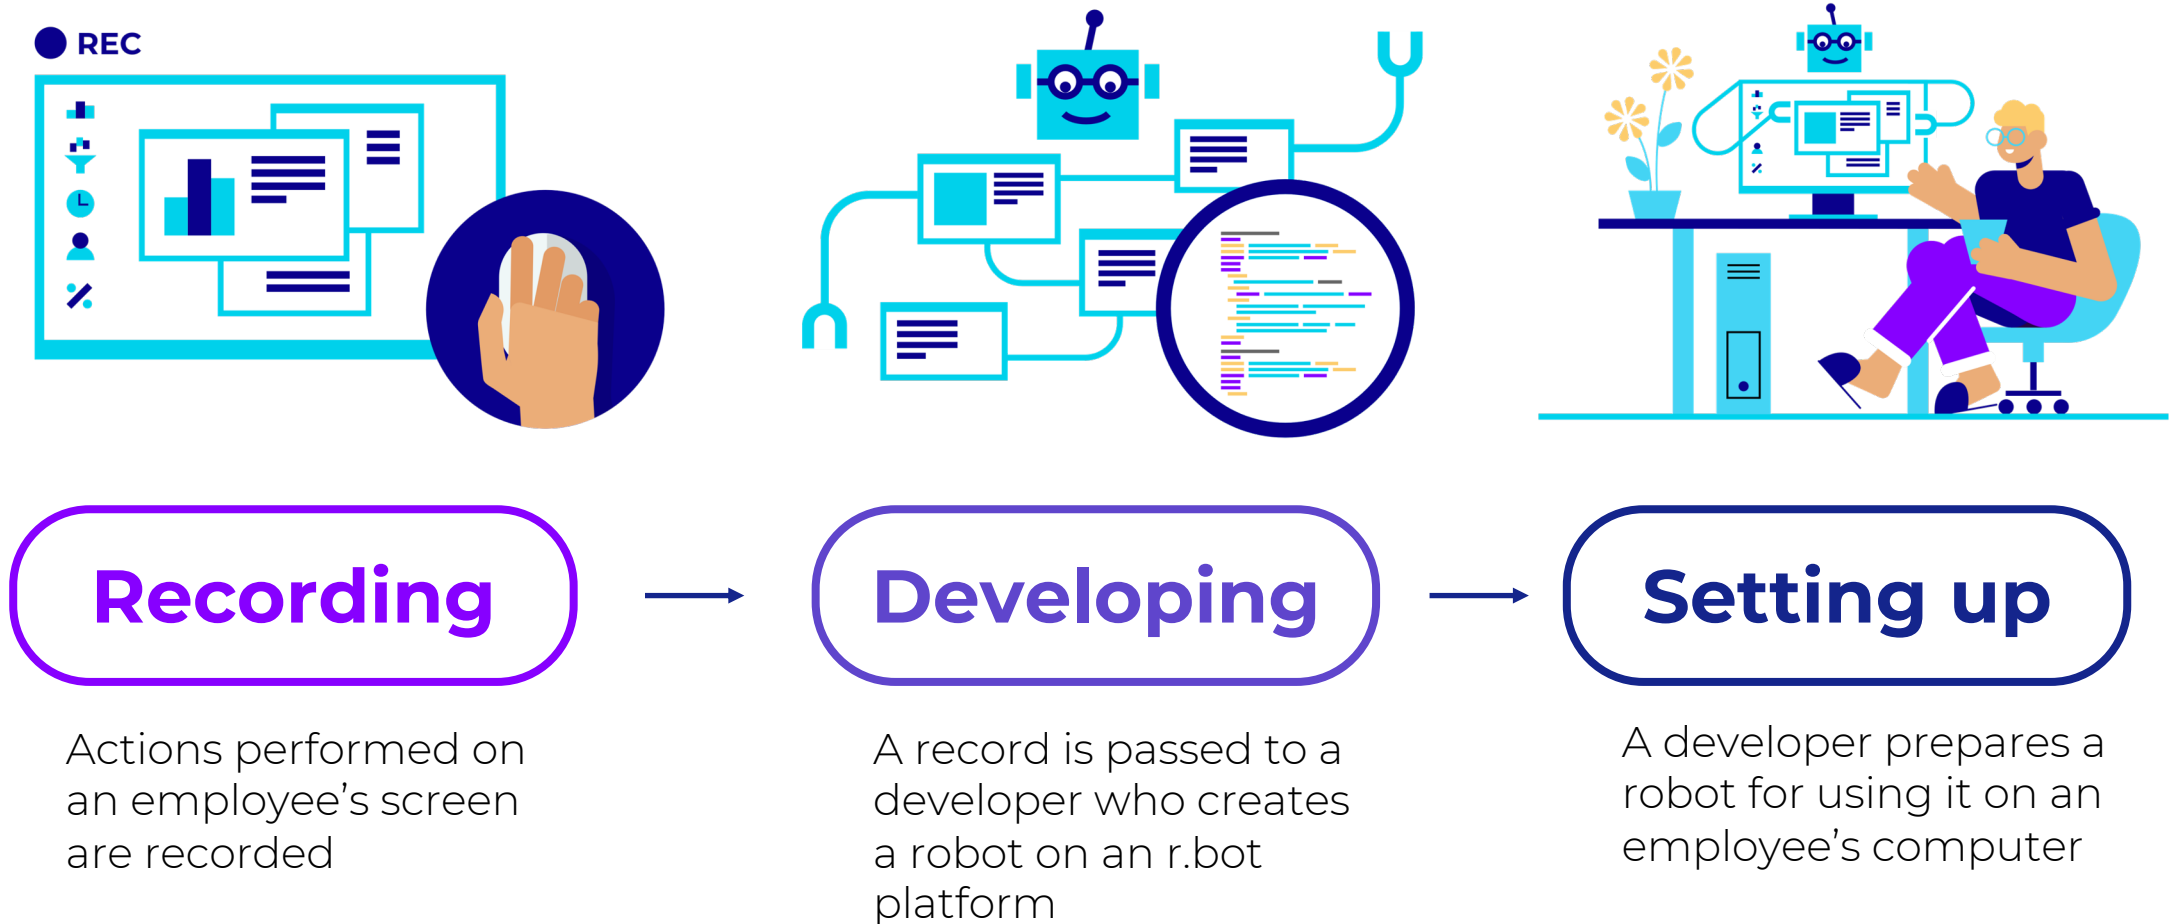

Built-in
browsers

PHP, C#,
Python, JS
Programming
languages

How robots are created?

Competitive analysis

	r.bot	UiPath	Robin	Elektroneek
1 Programming language	PHP, C#, Python, JS	C#, Visual Basic	C#, Python, Java	JS
2 Orchestration tools	+	+	+	+
3 Visual Development Environment	+	+	+	+
4 Platform	.NET Framework (.NET5 soon)	.NET Framework	.NET Framework	JavaScript + Tensor Flow
5 Development Environment Cost, \$	~ 2,755	~ 2,975 + 19,856 orchestrator	~ 8,950	~ 2,755 + 7,738 orchestrator
6 Average cost of a robot design, \$	~ 1,377	~ 7,945	~ 2,478	?
7 Using other manufacturers' robots	Expected soon	—	—	—
8 Plug-ins and services similar to Captcha (Recaptcha 1,2,3)	+	—	—	—
9 OCR tools integration (images recognition, vision)	+	+	+	+
10 Accounting and office systems integration	+	+	+	+

Review

One of the largest Russian electricity retailers JSC ‘Mosenergosbyt’ jointly with «BizApps» successfully completed an RPA project on the r.bot platform for InterRAO energy company group.

In a short time we developed and brought to operations dozens of software robots. According to preliminary estimations, robots have increased productivity of each desktop by 40-60%. For example, now robots are conducting consumer debt checks for electrical and heating services. Not only has it reduced a great number of routine tasks performed by workers themselves, but also it reduced time for reconciliation errors analysis and processing.

Robotization – is one of the most promising avenues of business process automatization at IT-market. It doesn't require any complex metrics for economic effect identification and allows to get an instant return on investment.

“

**Evgenii Romanovich
Ionikeev**

The Chief of the Support
Division
JSC «Mosenergosbyt»

”

Value we have created for JSC «Mosenergosbyt»

This case study is an example in point of robot implementation for JSC Mosenergosbyt

Before robotization:

3 legal department employees filed and sent applications to the official website of the Federal Bailiff Service for obtaining the status of enforcement proceedings. It took 20-25 minutes to submit only 1 application. One employee could send 20-25 applications per day.

After robotization:

The robot prepares and sends at least 1200 applications in 7 days. It works at night, and in the morning, the employee who is responsible for this task can literally harvest the fruits of a robot's 'night shift'.

Results

1 employee is involved in the process

12 times more applications processed per week

from **6** to **8** hours of free time for lawyers per day

Robot-performed action examples

Nº1. Contracting partner verification

Checking the consistency of legal entities data with the Register of Legal Entities.

Time spent before robotization: 4 hours per day

After: 1 hour per day

Robot price: ~ 275 \$

You save: ~ 8,328 \$ a year

Payback: 4,37 months

Nº2. Documents preparation

Collecting and compiling different format files in one document (agreement) according to the set rules.

Time spent before robotization: 20 minutes per document

After: from 2 to 7 per document

Robot price: ~ 1,101 \$

You save: ~ 7,807 \$ a year

Payback: 5,93 months

Nº3 e-Tendering

Search for suitable competitions on the e-platforms and filing out participation forms.

Time spent before robotization : 3 hours per day

After: 1 hour per day

About 50 requests per day

Robot price: ~ 1,376 \$

You save: ~ 6,242 \$ a year

Payback: 7,94 months

Therefore,

rbot reduces time and required manpower for tasks completion.

One robot could replace 3 human employees

Consider robotization? Here is what to remember:

Robotization can be performed if a process has been formalized and prepared for further robotization

Average payback period is 7 months

A company should act with discretion when it comes to processes robotization, especially if estimated payback time greater than 2 years

Robotization process cost-effectiveness is directly related to the number of automated processes

We are ready to enter foreign markets

Here is why

We have worldwide
experience

R.bot does not require
localization.
The technology itself suits **any
business process**

Both our product and
website are now
available in English
